

(1) Foundational OF Analytics

(1) Business Analytics → The systematic use of data, statistical analysis, and technology to understand business performance, identify trends, and support strategic decision making.
Ex → A logistic company analyzing delivery times and routes to find ways to reduce fuel costs and speed up shipments.

Source → Investopedia, Business Analytics

~~(2) The process of examining, etc~~

(2) Data Analytics → The process of examining, cleaning, transforming, and modelling raw data to discover useful information, draw conclusions, and support decision making.

Example → A social media platform analyzing user behaviour data to show personalized content and targeted advertisements.

Source → IBM, What is Data Analytics

(3) Business Intelligence → A set of tools and processes used to collect and convert raw business data into meaningful reports and dashboards for better understanding and oversight.

Example → A manager using a dashboard to view daily sales figures, inventory levels, and employee productivity in real-time.

Source → Tableau, What is Business Intelligence

(4) Data-Driven Decision Making → A management approach where decisions are based on analyzed data and facts rather than intuition, observation, or personal experience alone.

Example → A bank using customer data to accurately predict which clients are likely to repay loans successfully.

Source → Harvard Business Review, What it takes to become a data-driven organization.

(5)

(5) Big Data → Extremely large and complex datasets that grow at high speeds, characterised by high Volume, Velocity, and Variety, which require advanced tools to process.

Example → Google processing billions of search queries everyday from users all over the world.

Source → What SAs, 'What is Big Data'.

(6) Descriptive Analytics → The simplest form of Analytics that summarizes historical data to answer the question, "What happened in the Past?"

Example → Generating a Monthly Sales report that shows exactly how much revenue was earned and which products sold best.

Source → Zartner, "Descriptive Analytics".

(7) Diagnostic Analytics → Analysis that goes beyond describing what happened to understand why it happened by looking for causes, patterns, and relationships in the data.

Example → Investigating why sales dropped last month by checking factors like price changes, the weather, or competitor promotions.

Source → Oracle, "Types of Analytics".

(8) Predictive Analytics → Uses statistics and Machine Learning to estimate the likelihood of future outcomes based on historical data, answering, "What is likely to happen?"

Example → An e-commerce website suggesting products you might like based on what you and other similar users have bought before.

Source → McKinsey and Company, "Big Data: The Next Frontier for Innovation".

(9) Prescriptive Analytics → The most advanced form of analytics that suggests specific actions or strategies to optimize outcomes, answering, "What should we do about it?"

Example → A Ride Sharing App automatically adjusting Prices and suggests better routes to drivers to maximise profit and reduce wait times.

Source: Deloitte, "Prescriptive Analytics".

(10) Data Literacy → The ability to read, work with, Analyse, and argue with data: Understanding what data means, how to interpret it, and how to use it correctly.

Examples → An employee being able to read Chart correctly and explain what the numbers mean to their team.

● Source: Qlik "What is Data literacy".

(11)

(2) Data, Measurement and Reporting

(1) Structured Data → Highly organised information that fits neatly into fixed fields (rows and columns), usually stored in relational databases (SQL)

● Examples → A Spreadsheet of Customer name, phone numbers, and transactional totals.

Source: IBM Data Management Standards.

(2) Unstructured Data → Data that does not have a pre defined format, making it harder to collect and analyse using traditional tools.

Example → Customer review videos on YouTube, PDF Contracts, or audio recordings of support calls

Source: Sanjour IT Glossary

(3)

(13) Data Warehouse → A central repository that aggregates data from multiple sources (Sales, HR, Marketing) into one place for deep analysis and reporting

Example → A retail giant like Walmart storing years of global sales data in one system to analyze seasonal trends

Source: Oracle Data Warehousing fundamentals.

(14) Data Mining → The process of using software to find hidden patterns, correlations, or anomalies within large datasets to predict outcomes

Example → A grocery store mining "loyalty card" data to discover that people who buy diapers also tend to buy beer on Friday nights

Source → Investopedia

(15) Data Visualization → A graphical representation of information and data using visual elements like charts, graphs and maps.

Example → Using a heat map to show which regions of a country have the highest sales growth

Source: Tableau (The Visual Display of Quantitative Information)

(16) Dashboard → A real time, interactive tool that displays multiple visuals on one screen to monitor business performance.

Example → A CEO looking at a screen that shows today's live revenue, website traffic, and active users side-by-side

Source: Microsoft Power BI Presentation.

(17) Metric → A simple quantifiable measurement of a specific process. It tells us how much or how many.

Example → The total number of visitors to your website yesterday

Source : Google Analytics Academy.

(18) Key Performance Indicator (KPI) → A metric that is critical to the success of an organisation. It measures progress toward specific strategic goal.

Example → If a company's goal is Profitability; their KPI might be Net Profit margin

Source : The KPI Institute

(19) Benchmark → A standard or point of reference against which things may be compared or assessed

Example → Comparing your company's 10% employee turnover rate against the 15-16% industry average to see if you are performing well

Source : Strategic Management Journal

(20) Segmentation → Dividing a broad target market or dataset into smaller, manageable subsets of people or items with similar characteristics

Example → An airline sending first class offers to only customers who have spent over ₹100,000 in the last year

Source : Philip Kotler's "Principle of Marketing".

(3) Customer and Sales KPI's

(21) Conversion Rate $\rightarrow$ The ~~percentage~~ ^{Visitors} of visitors or leads who take ~~desired~~ ^{desired} action (e.g. making a purchase or signing up for a newsletter).

Example $\rightarrow$ If 1000 people visit your website and 50 people buy something, your Conversion Rate is 5%.

Source: Adobe Experience Cloud Glossary

(22) Customer Acquisition Cost (CAC) $\rightarrow$ Total Cost of sales and marketing efforts needed to acquire a single new customer.

● Example $\rightarrow$ If you spend \$1000 on ads and get 10 customers, your CAC is \$100 per customer.

Source: Hubspot Marketing Analytics

(23) Customer Lifetime Value (CLV) $\rightarrow$ Total amount of money a customer is expected to spend with your business during their entire relationship with you.

Example $\rightarrow$ Netflix subscriber paying R150 a month for 3 years has $\rightarrow$ CLV of R5400.

● Source $\rightarrow$ Harvard Business Review

(24) Churn Rate $\rightarrow$ The percentage of customers who stop using your product or service during a specific time period.

Example $\rightarrow$ If you start the month with 100 subscribers and 5 cancel, your Churn Rate is 5%.

Source: Investopedia

(25) Customer Retention Rate $\rightarrow$ The percentage of existing customers who remain customers over a given period (the inverse of Churn).

Example → A gym that keeps 90 out of 100 members from one year to the next (year) has 90% Retention Rate.

Source: Zartner Customer Service and Support Research (24)

(26) Net Promoter Score (NPS) → A gold-standard metric that measures Customer loyalty and ~~Satisfaction~~ Satisfaction by asking: "How likely are you to recommend us to a friend?".

Example → After a flight, an airline sends a Survey. Scores of 9-10 are 'Promoters', while 0-6 are 'detractors'.

● Source: Bain and Company (Creators of NPS)

(27) Average Order Value → The average dollar amount spent every time a customer places an order.

Examples → A clothing store has three sales: R20, R40, R60. The AOV is R40.

Source → Shopify ECommerce Guide.

● (28) Sales funnel → A visual representation of the customer journey, from the moment they became aware of your brand to the final purchase.

Example: 1000 See an ad (Awareness) → 200 Click (Interest) → 50 add to Cart (Desire) → 10 Buy (Action)

Source: Salesforce CRM fundamentals.

(04) Marketing and Campaign Analytics

(29) Marketing Campaign → A specific, coordinated set of activities designed to promote a product, service, or business goal over a set period

Example → Coca-Cola launching a "Share a Coke" holiday promotion across TV, billboards and social media
Source : American Marketing Association (AMA)

~~(30) Def~~

● (30) Post-Campaign Analysis → The process of evaluating a campaign after it has ended to determine its effectiveness against original goals

Example → Reviewing data to see if a summer discount increased sales by targeted 15%

Source : Marketing Science Institute.

(31) Incremental Revenue → The additional sales revenue that was generated specifically because of a marketing activity, above what would have happened anyway

Example → If you usually sell \$10k a week but sell \$15k during a sale, your incremental revenue is \$5k

Source : Journal of Marketing Research

(32) Return on Investment → A performance measure used to evaluate efficiency or profitability of investment

Example → Spending \$1000 on a campaign that yields \$2000 in profit results in 100% ROI.

Source : Investopedia

(33) Return on Ad Spent (ROAS) → Specifically measures gross revenue generated for every dollar spent on Advertising.

Example → If you spend \$1 on google ads and get \$5 in sales, your ROAS is 5:1

Source: Google Ad Help Centre

(34) Click-Through Rate (CTR) → The ratio of users who click on a specific link to the total number of users who view a page, email, or advertisements.

Example → An ad is shown 100 times and clicked 3 times, the CTR is 3%

Source: Interactive Advertising Bureau (IAB)

(35) Bounce Rate → The percentage of visitors who enter a website and then leave rather than continuing to view other pages within the same site.

Example → A user clicks an ad for shoes, lands on the page, and immediately hits back without hitting anything else.

Source: Google Analytics Documentation

(36) A/B Testing → A method of comparing two versions of a web page or app against each other to determine which one performs better.

Example → Showing half your users "Buy now" button in red and other half button in green to see which one gets more clicks

Source: Harvard Business Review.

(37) Lead Generation → The process of identifying and cultivating potential customers for business products or services.

Example → Offering a free e-book in exchange for users email address.

• Source : Hubspot Marketing Glossary

(38) Marketing Attribution → The Analytical Science of determining which marketing touchpoints a customer interacted with before making a purchase

Example → Deciding if the credit for sale goes to the first Facebook ad user saw or the final Google search they performed.

• Source : Salesforce Marketing Cloud.
